Total	**973**	**275**	**1248**	**2049**	**603**	**2652**	**3900**

1. Total Sales and Variability Interpretation

When review the Total sales by Year, there is strict ups and downs between years. From 2022 to 2023 total sales decreased from 323K to 229K. Then it increased to 381k which is more than the total sales in 2022. And in 2024, total sales are decrease (almost -%50) to 227k which is lowest number of total sales in 4 years.

In Total sales and Sales variability by category chart, the categories closer to upper right corner have high sales rate but also high risk and volatile. So, we see that the sales in clothing have many sales but also have huge volatiles because of the high range of sales between 2022-2024. Also, we see that outwear and accessories categories show stable total sales performance.

Lastly, when we look at the Total Sales by Year & Month and Growth Percentages Quartely chart, we observe how sales changes monthly between 2022-2024 and how these changes affect the Quarter growth rates. On the line chart, it is seen the biggest amount of sales has been made in June 2024 (which is also qtr2 2024). In addition, the biggest growth percentage has been calculated in qtr1 2024 because biggest amount of raise in total sales has been between oct 2023 – feb 2024.

2. Sales Distribution in Categories

When we examine the Total sales by Year and Category, we clearly see that the clothing is the all-time best with the huge margin compared to other categories. In the donut chart, more than %50 of total sales coming from the clothing. We also observe that any slightest increase or decrease in clothing sales have impacts the total sales. In other words, company's growth is strongly dependent on the sales in clothing.

3. Customer Demography Interpretation

When we look at the Total Purchased Amount by Gender and Categories chart, we get the result as huge number of sales coming from males in clothing. Also, when we review the Count of Item Purchased by Gender and Age group, the data show us males who is older than 30 has the biggest result.

Secondly, the product preferences changes depend on gender and age group. In product preferences matrix, we see that accessories and clothing are the most purchased categories in all genders and age groups. This result shows us once again how significant an impact clothing sales have on total sales.

Lastly, when we would like to see how payment methods change by gender, we see that while males mostly prefer to use cash and debit card, females use credit card and PayPal.
